

March 26, 2009

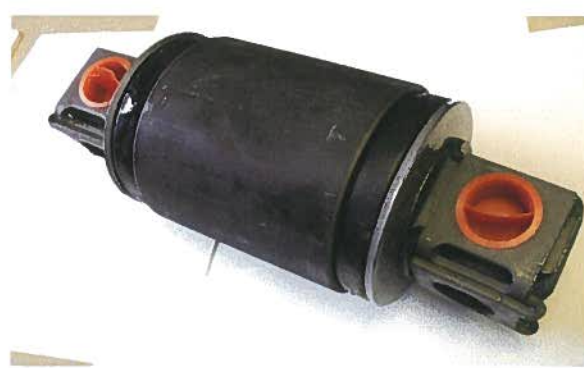

Dear Valued Customer,

Effective immediately, a product change will be made to our current 34013-087L and 34013-088L Bar Pin End Bushing Kits. This simple design change will be used for all Production and Aftermarket customers and orders. Engineering has made a change to the bar pin which is the inner metal that is used to make up the subject kits. This change, which basically is eliminating the small tabs on the ends of the bar pin, was due to the ends of the bar pin casting interfering with the dust shield & the brakes on some newer designed trucks. Because this is a running change, nothing is required to be done on your end. In addition, there are no compatibility issues with running a new and old version of this bushing on opposite sides of the beam. If you have any questions regarding this change, please let us know.

New 34013-087L

New 34013-088L

Sincerely,

Edward Powderly
Business Unit Manager-Aftermarket
