**ENHANCE**

**YOUR PERFORMANCE**

## HENDRICKSON SHOCK ABSORBERS

**H**endrickson shock absorbers are designed and tuned for optimum ride with specific strokes, damping characteristics, seal designs, and bore diameters to enhance the performance of your suspension system. This contributes to increased steering control, improved braking, greater sensitivity, and better overall performance.

**A** shock replaced with a non-genuine alternative, can have too long or too short of a stroke than required by the suspension and can lead to expensive repairs. Too long of a stroke may allow over extension of the air springs or increase fatigue on parabolic springs. Alternatively, too short of a stroke can damage mounting brackets.

**G**enuine Hendrickson shock absorbers can easily be identified by the stamped Hendrickson name, logo, and part number on the dust shield or cylinder.

**T**hese heavy-duty shock absorbers are available for use on Hendrickson's HAS air suspension for vehicles with a high torque engines. They incorporate a patented rebound spring which limits rapid shock extension during acceleration.

**R**eplacing a HI-TORQUE shock with a non-HI-TORQUE shock, will cause premature wear and have adverse effects on all other driveline and suspension components.
